

SUBMISSION INSTRUCTIONS

We accept papers that have never been published before and are not intended for simultaneous publication in other books or journals. The paper must be written in English and carefully read by the author(s). The volume of the paper is 15,000–25,000 characters, including figures and tables. The number of authors allowed is not more than three.

The title of the paper should fully reflect the idea of the research, be as concise as possible (up to 7 words) and specific, formulated in a scientific style. Its purpose is to attract the attention of the reader with common scientific interests. Acronyms are not recommended. The exception is well-known and widespread acronyms.

The abstract should contain a brief (250 words) summary of the research in English, where the following is clearly stated:

- ✓ relevance of the research presented in the paper;
- ✓ the hypothesis that underlie research;
- ✓ the methodology of its verification and the
- ✓ obtained results.

The text of the abstract must be complete and logical.

Keywords (up to 6 words or phrases).

[JEL Classification Codes](#) – provide up to 5 standard JEL codes.

The introduction of the article should:

- reveal the prerequisites and relevance of the conducted research, define the problem to be solved;
- analyse the latest studies and publications in which the solution to this problem was initiated and which the author considers to highlight previously unresolved issues of the general problem to which the article is devoted. The review should not be limited to works published in the country where the author lives and works — the problem should be studied globally. It is necessary to cite only those sources that are really valuable for the author's research, analyse the contribution of each researcher to the solution of the researched problem, make a reference to each source with a mandatory indication of it in the list references; in the case when the review of scientific literature is large in scope, and its analysis/systematization, etc. is one of the main results of the research presented in the paper, it can be placed in a separate substantive section of the main part of the paper;
- outline the purpose of the paper and, if necessary, a list of tasks to ensure its implementation;
- determine the hypothesis that underlies research, the methodology of its verification; indicate what information used, how the relevant information was processed, what are the limitations of the study; describe the step-by-step algorithm for testing the stated hypothesis and its correction (if necessary). Simple enumeration of research methods or references to methods not used in the work are not allowed;
- describe the structure of the paper, divided into subsections, where the results of the conducted scientific research are consistently and reasonably disclosed. The description of each structural element should be concise.

The text of the introduction should be coherent and logical. It is not recommended to divide it into subdivisions.

The body of the paper should be divided into sections. Each section, which is numbered consecutively, starting from the first, has a title that correspond to the material presented in it and is a logical continuation of the previous sections of the paper. The logic of the structuring of the paper should correspond to the research methodology stated in the introduction. Separate sections may (if necessary) be divided into subsections.

Conclusions are given at the end of the article in a separate section and are not numbered. They should summarize the results of the research, while clearly correlating with the purpose of the article and tasks (if defined), illustrating the achievements. In the conclusions, it is necessary to indicate whether the scientific hypothesis underlying the research was confirmed or refuted. If additional unplanned results are obtained during the study, this should be noted. It is also necessary to clearly formulate the scientific novelty and the contribution of the research carried out by the author(s) to the solution of an important scientific or practical problem, to determine the practical value of the obtained results, to outline the prospects for further research in this direction.

References, placed at the end of the paper, is drawn up according to the International Bibliographic Standard APA-7.

References are given in the original language. If the original language is different from English, the English translation of its name should be given in parentheses. Proper names (name of the author, name of the publishing house, etc.) are transliterated in Latin. References to unpublished works are not allowed.

All references must be presented in the text of the paper (in parentheses) each time you quote or paraphrase it. References in the text should contain information about: the author of the cited work (editor/compiler/name of the cited source, if the author is not available), the year of publication and the page interval (numbers of the pages from which the citation is given). Page interval may be omitted if you are not quoting but expressing an idea or referring to the work as a whole.

Acknowledgments. This section expresses gratitude to individuals or organizations for any technical assistance; ideas; financial (material) support that made the research possible.

If the research was conducted within the framework of a grant or R&D project, the relevant information should be provided. If there are no acknowledgments, then indicate: "None".

Conflict of interest. Authors are required to disclose all potential sources of conflict of interest. A conflict of interest is any interest or relationship that could be perceived as affecting the author's objectivity. Such conflicts should be disclosed if they are directly relevant or directly related to the work that the authors describe in the paper.

The presence of a conflict of interest does not preclude publication. If authors do not have a conflict of interest, they should declare it when submitting the paper. Authors are responsible for familiarizing themselves with this policy and disclosing all relevant commercial and other relationships when submitting the paper.

Inadequate disclosure of a conflicts of interest, whether identified at the time of submission or during the review process, may be grounds for rejection of the paper. If there is no conflict of interest, "None" should be noted.

The electronic version of the manuscript is submitted by e-mail:
